Challenge

Significant erosion was found below the water line on a chilled water tank at a southwestern Ohio packaging plant. The customer needed the repairs completed in one day.

Engineered Solution

HydraTech's specialty WaterLine coating was selected as a solution more effective than paint, and less than half as costly and time-consuming as tank replacement. WaterLine is a NSF/ANSI 61 certified epoxy approved for use in contact with potable water.

Scope

The site was indoors with good access. The applicator grit-blasted the tank's surface; then coated it with WaterLine, patching minor leaks discovered in the process.

Solution

WaterLine provided a quick, cost-effective, and durable corrosion-inhibiting solution.
